- ✓ Managed projects related to chat-bots, NLP search and ticketing. Talking with clients to analyse the needs and viability.
- ✓ Developed functionalities for customer adapting company product to each them.

PHP | Vue.js | jQuery | MySQL

Projects

Messenger

A tiny Go library to easily publish/subscribe asynchronous messages with outbox pattern, supporting different message stores and brokers.

<https://github.com/x4b1/messenger>

Go Coverage Report

Command line application that parses golang coverage output and outputs a pretty report, supporting different types of outputs. Mainly used to publish the report in github PRs checks to avoid paying third party tools.

<https://github.com/x4b1/go-coverage-report>
